### Full Workshop Meetings

The plan is to have about 7 Tables with specific topics and 2 Troubleshooting Tables (see sample image below). The meeting starts with announcements and shows the attendees the topics on each table. After the announcements, people go to the topic table they are interested in. Note: People can bring their own laptop. When they arrive at a Workshop Table, people can fill in a question about the topic. Each table will show some tips about the topic using a monitor before answering any questions.

## Workshop Theme Meetings

Workshop Them Meeting is very similar to the normal meeting. The difference is that after the break, there will be one Workshop Table with the Presenter to address any questions about the presentation, and 3 Guru Troubleshooting Tables that will address any general questions. The Guru Troubleshooting tables may start with some quick tips. People will write down their questions, so each person at the table will get to see the answer. Below is a sample layout.
